

LUMINOR COLLECTION

BY **STONE ITALIANA S.P.A.**
AS MANUFACTURERS

Luminor is a luminescent and luxuriously metallic surface, produced in limited edition, for floors and walls in exclusive locations. A "stone metal", material characterized by an almost 50% presence of metal silicon, coming from recycled metal silicon waste used for computer microchips pieces.

The other components of this very unique material are sands, selected quartz and a minimum percentage of polyester resin (approx. 7%). Although small, this percentage allows material processing to different cuts in order to reach a completely customized design to obtain 305 x 140 cm slabs.
