

## STONE ITALIANA

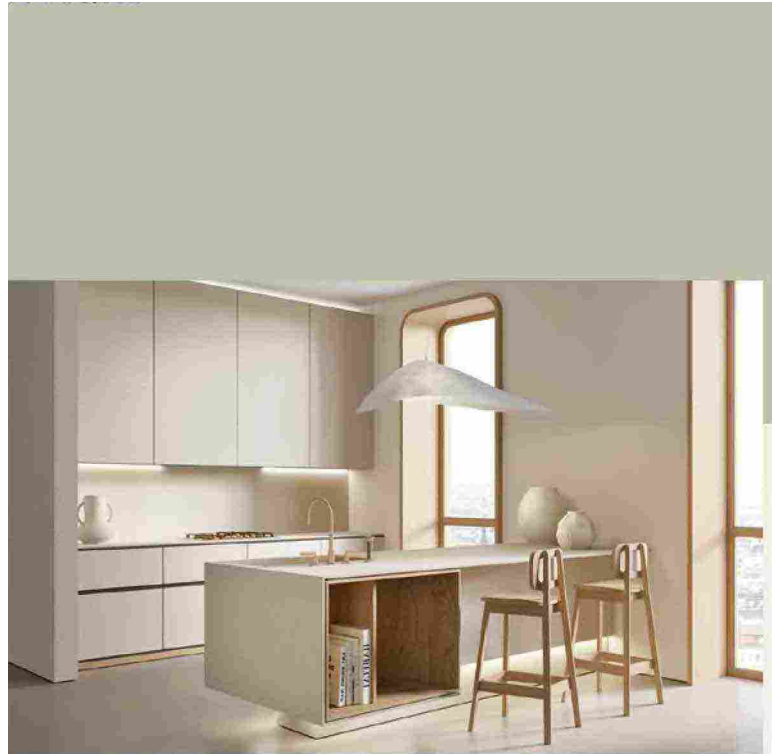

Cosmolite® is the hi-tech large-format panels project designed to blaze a new trail in terms of both style and substance: consisting entirely of pre-consumer recycled aggregates other than quartz, these surfaces offer unique aesthetic performance and perfect workability, as well as high standards of hygiene.

Available in five different collections and 20 colours, these panels are ideal for all large surfaces where strong environmental credentials are a priority (the carbon footprint for Cosmolite®, as measured in the Carbon Footprint state-

ment, is almost 45% smaller than that of other comparable products).

The project is underpinned by three key factors: environmental performance (it helps create a circular economy in which recycled products are upcycled by introducing them into a new industrial process), industrial innovation (it is based on an exclusive formula) and design (the use of new materials gives rise to hypnotic, immersive aesthetics).

Recently presented at Sicam, "VENANTIS" is the latest Cosmolite®

2023 collection, whose name hints at the innovative feature of the range, namely the subtle vein pattern that runs through the entire thickness of the material, bringing stylistic continuity to the finished product (pictured). The range of six colours, from the softest white to bold black, via warm beige and innovative green, make Venantis the ideal choice for people looking for distinctive new products with a high degree of sustainable content and outstanding aesthetic quality for use in interior design elements such as kitchen countertops, worktops, cupboard doors and wall surfaces.
